Porn Service Announcements

A screenlife short film told entirely through one teenage boy's screen, tracing what he watches over the course of a typical evening online.

Concept Note
A SafeBAE Short Film

SAFEBAE
BEFORE ANYONE ELSE

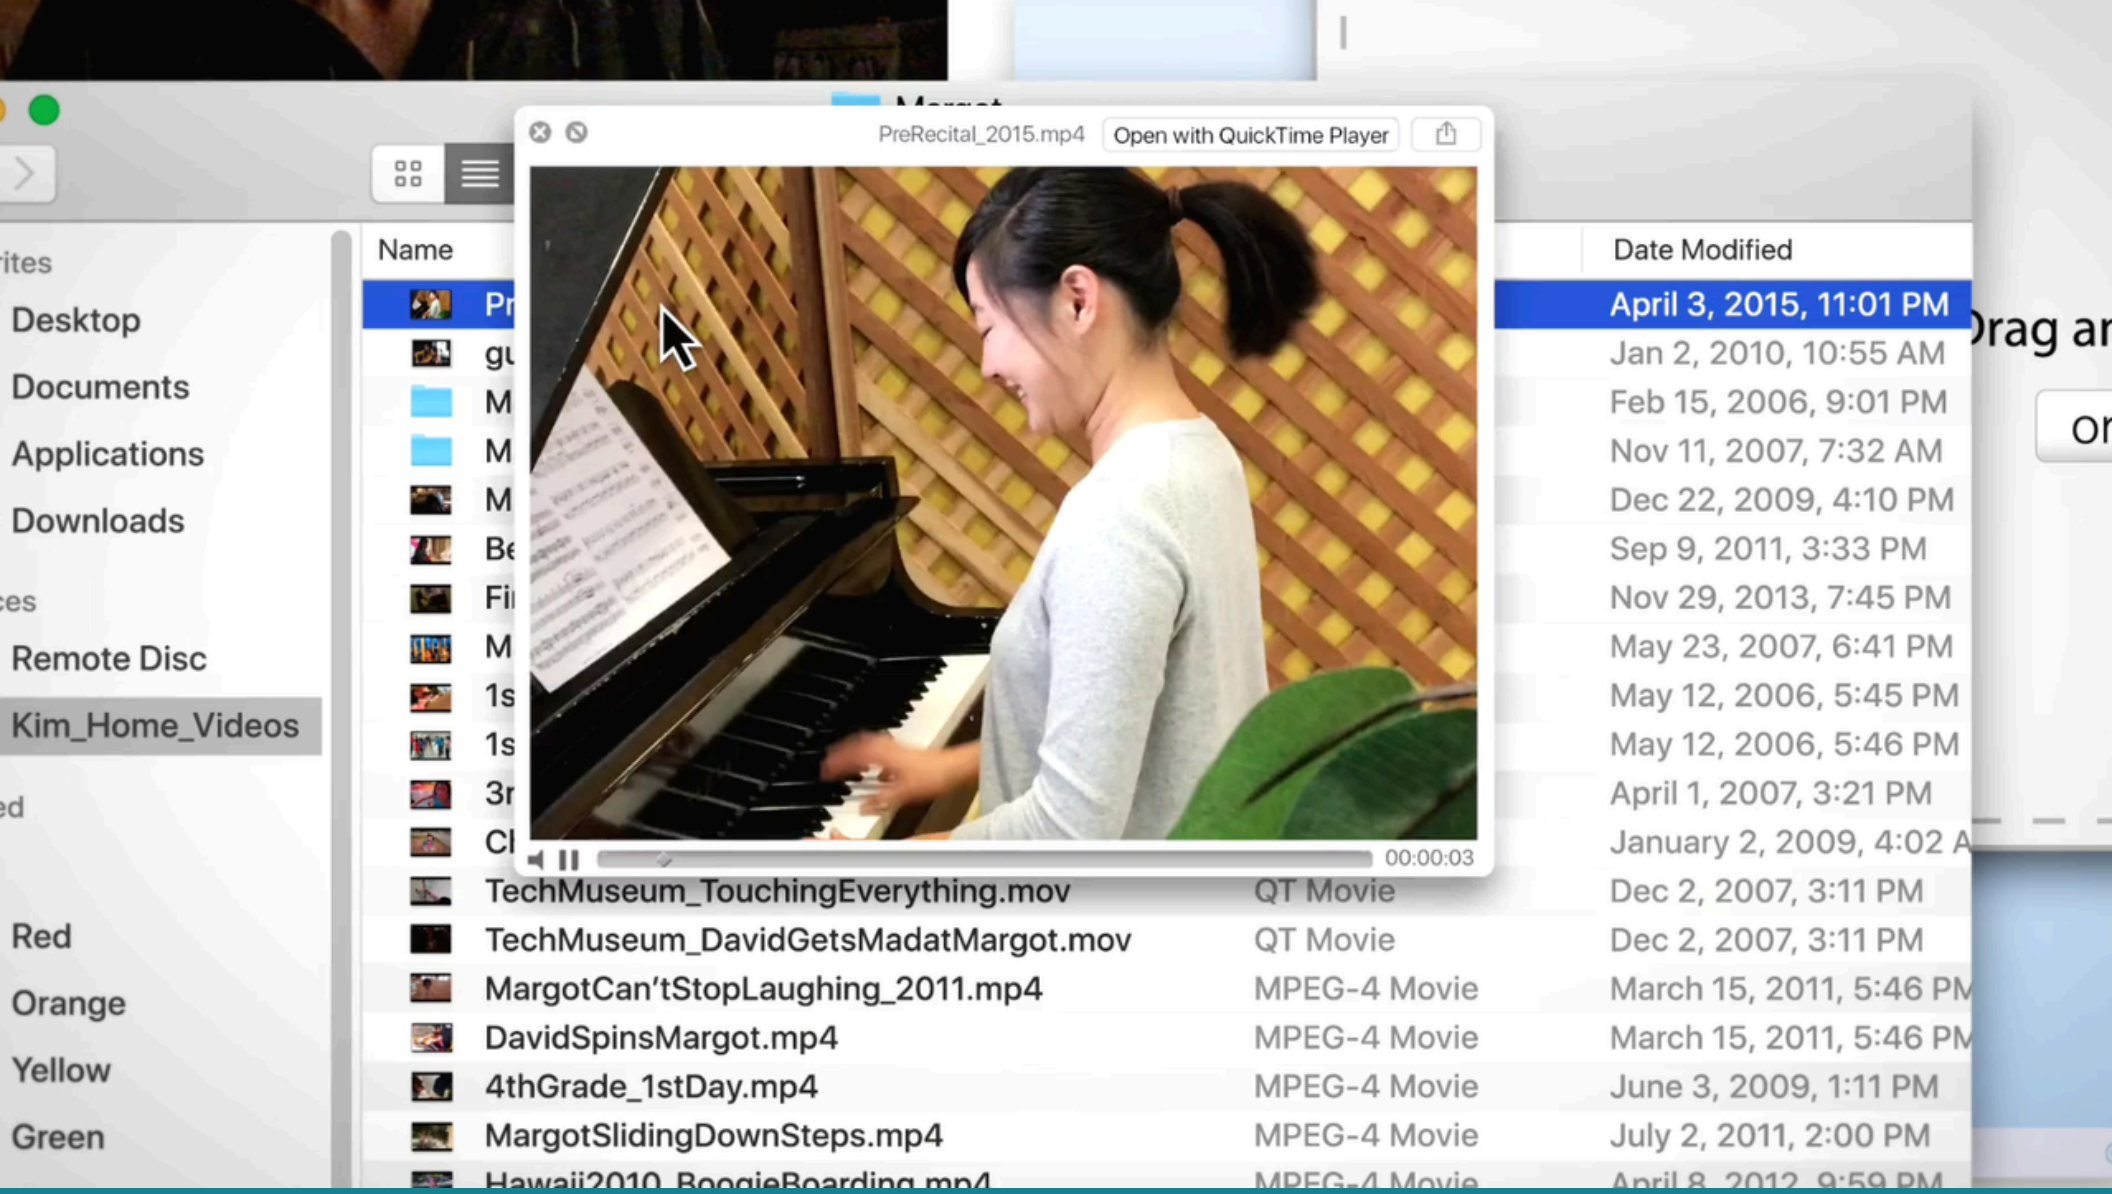

Concept

A short film set entirely on one boy's computer screen over one evening. He jumps between a sitcom video essay, a manosphere podcast, an AI chatbot, a pre-roll ad and a livestream. Each one parodies a real format and carries a message young people see online every day:

- Nudify apps and deepfake nudes (the sitcom)
- Being targeted with pornography at a young age (podcast & the ad)
- Manosphere influencers and harmful messaging about masculinity
- Looksmaxxing and harmful 'healthy' habits (livestream & feed)
- Sexual strangulation presented as normal (the livestream)
- AI Chatbots used for personal advice and emotional support (the chatbot)

The scenes mirror the normal user experience of a young person online and is intended to feel chaotic and overstimulating.

By the end of the film, his feed has shifted from gaming clips to looksmaxxing and manosphere videos, depicting how algorithms escalate content in young people's feeds quickly and drastically. The film will join SafeBAE's library with a teaching guide and awareness campaigns for each topic addressed.

We never leave the screen

The whole film is a recording of his computer screen: his tabs, the videos he picks and the texts from his mom that he ignores. We don't see him until the last shot.

Reference: *Searching* (2018), a thriller told entirely through computer and phone screens.

Multicam Teen Sitcom

Reference: studio-lit classroom sets from *Girl Meets World*, *iCarly*, *Victorious*.

We open with our young viewer scrolling VideoTube and clicking on a clickbait video essay about a teen sitcom pilot, in which a substitute teacher accidentally teaches her class how to take a standard image and nudify it (aka remove the clothing from the person in the picture).

GOALS:

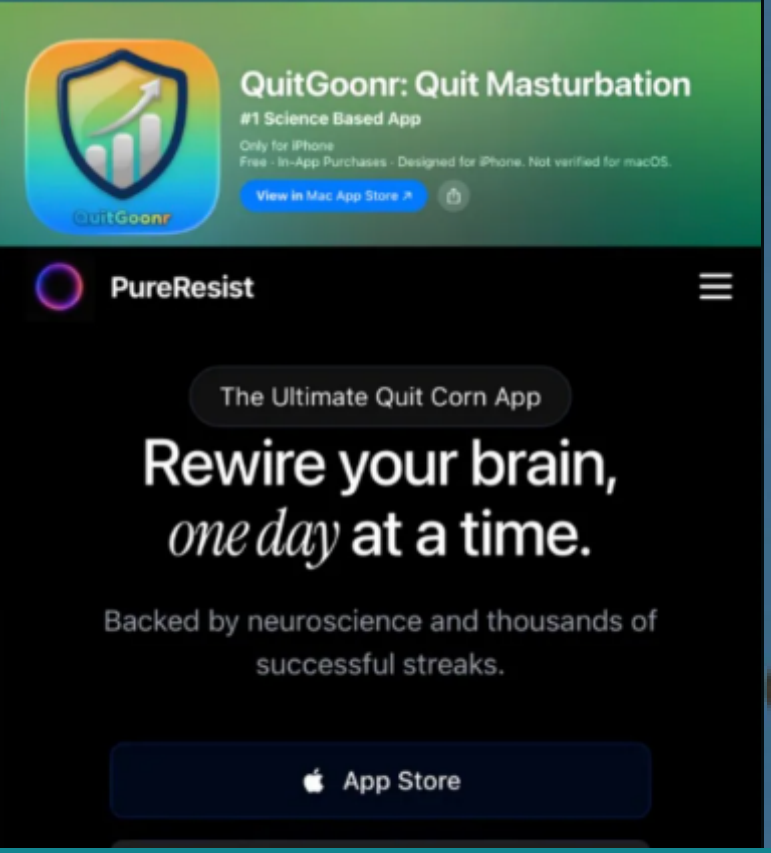

- Showing how easy these apps are to access
- Showing how normalized it is among teens
- Showing the harms of AI deepfake nudes

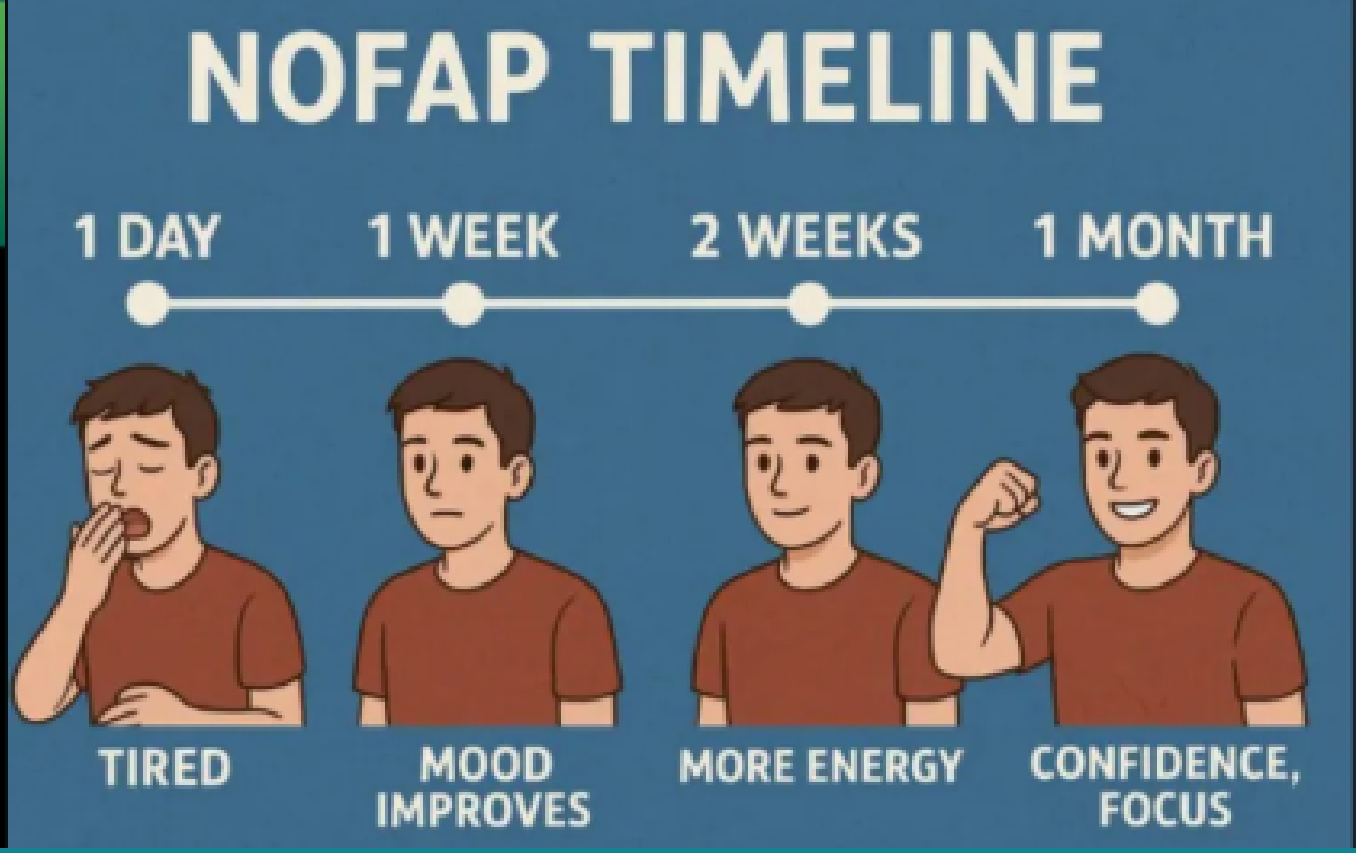

The Podcast

The algorithm then brings our young viewer to a male-led podcast, *Call Him Daddy*. The host's guest is a doctor, and his goal is a gotcha moment: he aims to paint her in a bad light and convince his listeners that he is a trusted influencer whose messages they should believe, even though those messages have no evidence behind them.

Similar to Louis Theroux's documentary Inside the Manosphere, we want our audience to understand how these influencers win young men's trust and then sell to them.

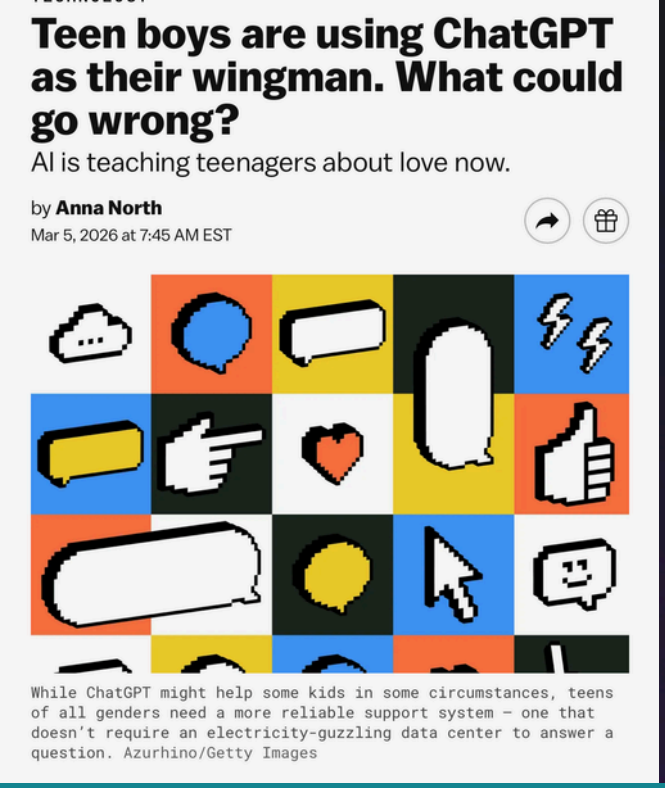

One of the things he promotes is a subscription to his anti-masturbation app, MONKMODE.AI. It is based on REAL targeted messaging young men are getting online. Pornography is easy to access, and anti-masturbation apps use shame to sell subscriptions that have no evidence of working.

The doctor focuses on the hypocrisy of the podcaster, who also owns an agency managing the OnlyFans accounts of several young women.

GOALS:

- Raising audience awareness of the grifting of many influencers
- Increasing awareness of unethical marketing and algorithm influence
- Encouraging discernment of trusted sources

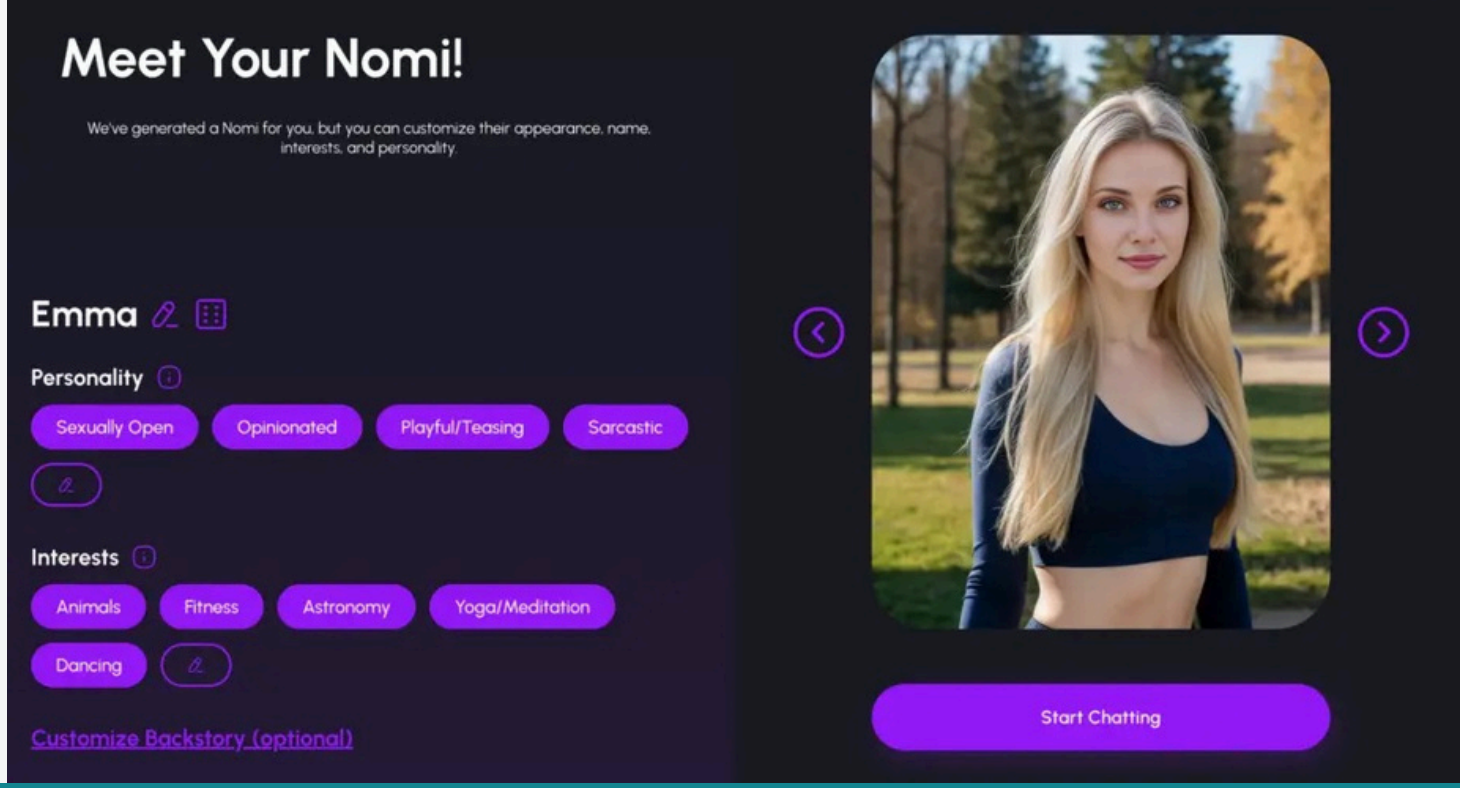

Teen boys are using ChatGPT as their wingman. What could go wrong?

AI is teaching teenagers about love now.

Mar 5, 2026 at 7:45 AM EST

While ChatGPT might help some kids in some circumstances, teens of all genders need a more reliable support system – one that doesn't require an electricity-guzzling data center to answer a question. Azurhino/Getty Images

The Chatbot

While the podcast keeps playing, our young viewer visits a chatbot looking for information and reinforcement of his ideas, ignoring his mother's texts in favor of the support and understanding of an AI companion.

GOALS:

- Increasing understanding of how chatbots can influence thinking, interrupt IRL interactions and reinforce harmful beliefs
- Raising awareness about the use of AI companions and their negative impacts on socialization and mental health

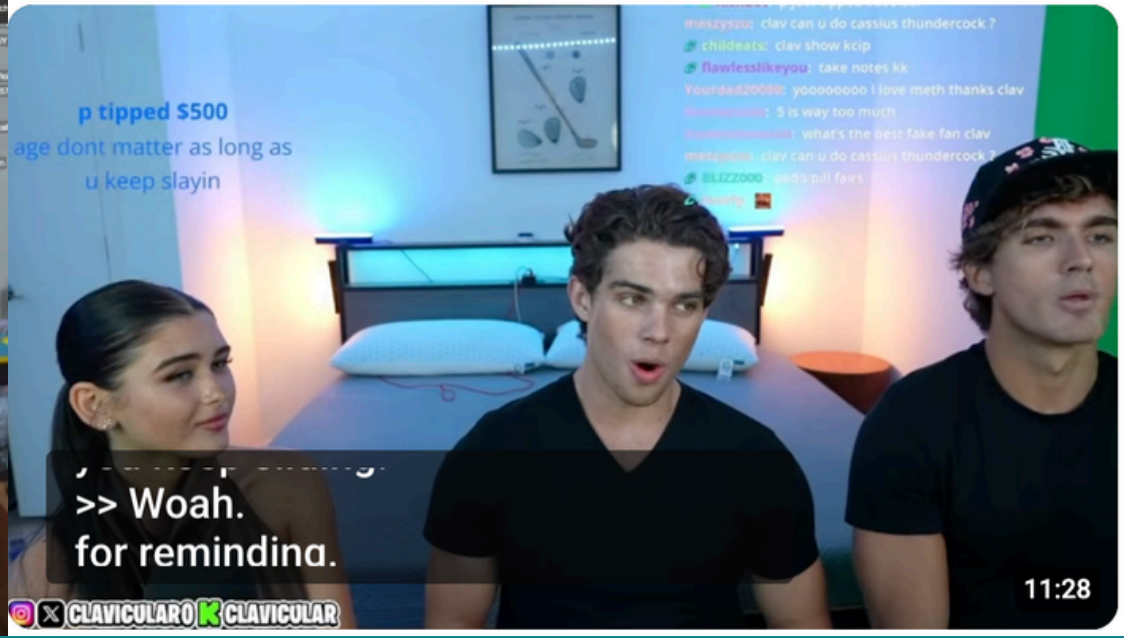

The Pop-up Ad

Mimicking the absurdity of an SNL mock ad, our ad for PORNEXA is modeled after a pharmaceutical commercial. It targets young people with the message that pornography can solve all of their problems, then reads its long list of harmful side effects as if they barely exist

GOALS:

- Helping teens become more aware of the very real harms of pornography and its influence on their relationships and understanding of healthy sex and intimacy

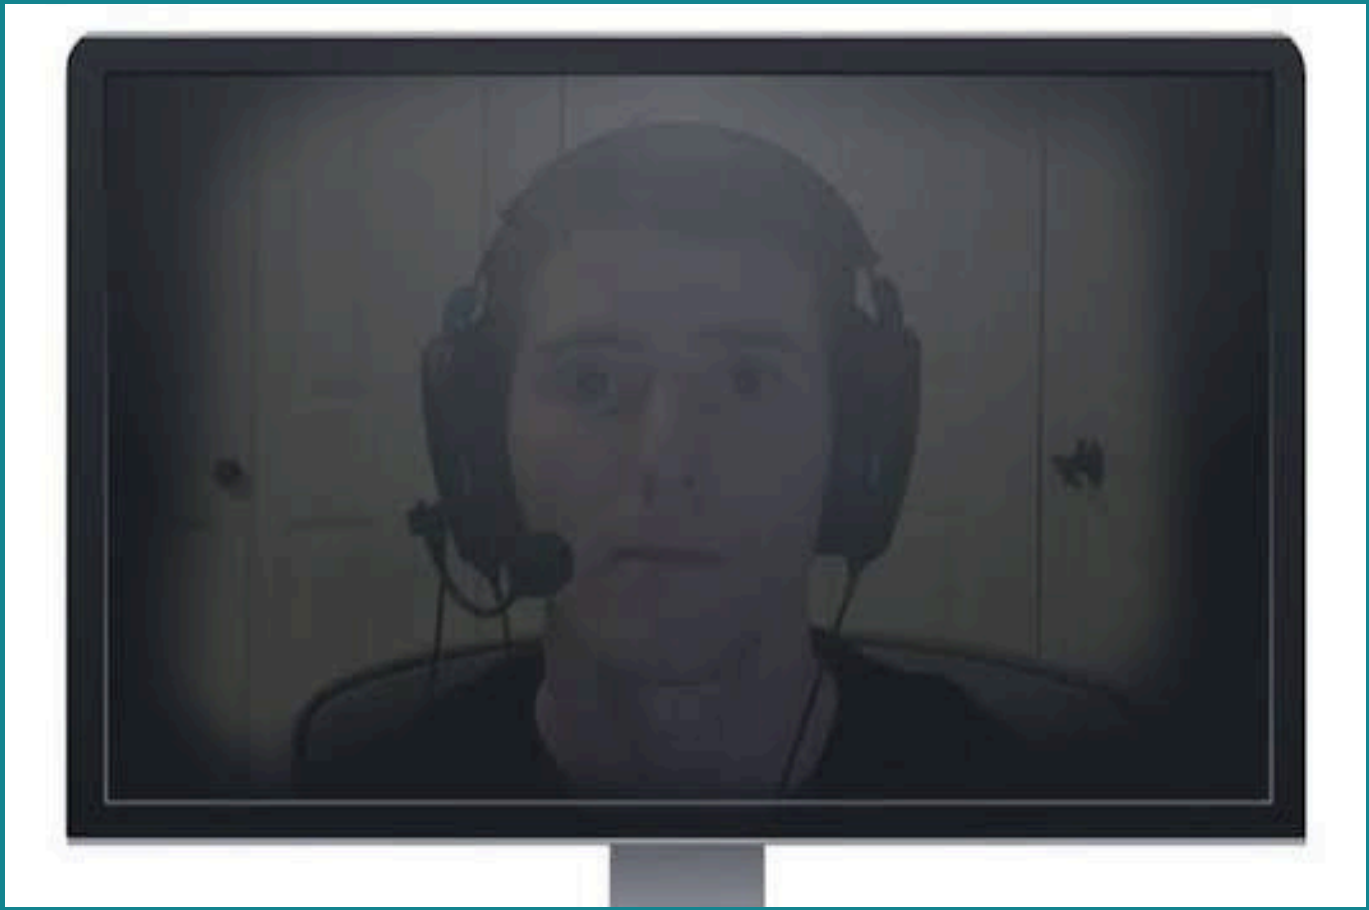

The Livestream

The next targeted content our young viewer sees is a popular livestream influencer. The screen is chaotic with live comments and interaction. The streamer is modeled after Clavicular, a widely viewed looksmaxxing streamer who was charged in Massachusetts in September 2026 with rape and drugging a person for sexual intercourse. We focus on his endorsement of sexual strangulation and his abusive treatment of his girlfriend to help our audience see how harmful his messaging is.

GOALS:

- Helping teens become more aware of the very real risks and physical harms of sexual strangulation
- Raising awareness about the harmful practices of manosphere influencers

The End

After his feed has filled with looksmaxxing and manosphere videos, our young viewer finally puts his computer to sleep. The black screen reflects back that he is much younger than we expected: 12 or 13 years old.

GOALS:

- Understanding that these influences start much younger than we think and affect our thinking much more than we realize
